Homework 5

- 1. Find the inverse of $\begin{pmatrix} 1 & -1 & 3 \\ 4 & 0 & -1 \\ -3 & 1 & 2 \end{pmatrix}$ by using determinants and the "Adjugate Formula". 2. Use Cramer's Rule to solve the system $\begin{cases} -y+z = -4 \\ -x+3y+3z = 4 \\ 2x + 3z = 1 \end{cases}$

3. Let
$$\mathcal{W} = \{(s, 0, t, 2s + 3t) : s, t \text{ real}\}$$
. Show that \mathcal{W} is a subspace of \mathbb{R}^4

- 4. Let $\mathcal{U} = \{(s, 3, t, 2s + 3t) : s, t \text{ real}\}$. Show that \mathcal{U} is not a subspace of \mathbb{R}^4 .
- 5. Show that the system

$$\begin{cases} w + 2x - y + z &= 2\\ 3x - 2y + 2z &= 4\\ 2w - x + y - z &= -1 \end{cases}$$

has infinitely many solutions but that the set of solutions of this system does *not* form a subspace of \mathbb{R}^4 .

6. Show that the set \mathcal{W} of Exercise 3 is the range of the matrix

$$A = \begin{pmatrix} 1 & 0 \\ 0 & 0 \\ 0 & 1 \\ 2 & 3 \end{pmatrix}$$

which means that \mathcal{W} is a subspace by the Example from class.

- 7. Let $\mathcal{Z} = \{(2s+t, s, -s+3t, t) : s, t \text{ real}\}$. Find a matrix A as in Exercise 6 to show that \mathcal{Z} is a subspace of \mathbb{R}^4 by the Example from class.
- 8. Let $\mathcal{V} = \{(s-t, -s+3t, s, t) : s, t \text{ real}\}$. Show that \mathcal{V} is a subspace of \mathbb{R}^4 by showing it is the nullspace of the matrix

$$A = \left(\begin{array}{rrr} 1 & 0 & -1 & 1 \\ 0 & 1 & 1 & -3 \end{array} \right)$$

and using the result of the Example from class.

- 9. Write (1, -1, 5, -5) as a linear combination of the vectors (1, 1, -1, 1), and (2, 1, 1, -1) or explain why it is not possible to do so.
- 10. Write (1, -1, 1, 2) as a linear combination of the vectors (1, 1, -1, 1), and (2, 1, 1, -1) or explain why it is not possible to do so.
- 11. Find vectors that span $\mathcal{N}(B)$ the nullspace of the matrix $B = \begin{pmatrix} 1 & 1 & 1 & -2 \\ 2 & 3 & 0 & -1 \end{pmatrix}$
- 12. Find vectors that span $\mathcal{N}(C)$ the nullspace of the matrix $C = \begin{pmatrix} 1 & -1 & 0 & 2 \\ 2 & 1 & 1 & 0 \\ 3 & 0 & 1 & 2 \end{pmatrix}$
- 13. Find vectors that span $\mathcal{R}(C)$, the range of the matrix $C = \begin{pmatrix} 1 & -1 & 0 & 2 \\ 2 & 1 & 1 & 0 \\ 3 & 0 & 1 & 2 \end{pmatrix}$
